Eco-Friendly Willow Cremation and Burial Carrier

The Passages[®] Willow Carriers are hand-crafted from sustainable, biodegradable willow by skilled weavers in small rural communities. They are designed for the dignified viewing or identification of a dressed or shrouded body and funeral services followed by burial or cremation. Each carrier features convenient flax rope and seagrass handles for carrying, along with a natural cotton lining. This lining is produced from 100% natural unbleached cotton and is leak resistant.

The carriers have a flat rigid base produced from 3/4" eco-friendly strawboard that allows for the easy movement of the carrier on rollers and church trucks. The carrier can be cremated or buried, or the body can be removed from the carrier prior to final disposition. If the carrier is to be used as a rental unit, replacement linings are available for purchase. The willow plants are fast-growing, easy to harvest and require no fertilizer. They replenish fertility in depleted soils, in addition to providing habitats for birds and insects. Willow is also easy to cultivate. The carriers contain no metal or plastic components and will comply with the requirements of most natural burial grounds.

Dimensions: 83.5" L x 24" W x 7" H

Test Weight: 350 lbs
